## **Entirely optional REFERENCE MATERIALS:**

Although you will definitely not NEED the following for Human Body, these are the reference books that I use in preparing lectures. If someone wants to buy you a special gift for medical school, these might be good options.

Gray's Anatomy 41st edition, edited by Susan Standring. Published by Elsevier.

The hard copy of the book has a scratch off code for accessing online material, which is definitely worth it, and you won't get this with a second hand version.

Robbins and Cotran Pathologic Basis of Disease, 9th edition. By Kumar, Abbas and Aster. This text is recommended in later courses at Pritzker. I use it to determine the points of emphasis in the histology material I deliver. Again, buying the hard copy gives you access to the online version. Of course, new editions come out and I cannot guarantee that the edition available now will be the edition available when you take later courses.
